What's in for you?

We would like to invite you to the OPEN DEI final event - not only to toast, but also to go into depth.
What got this collaborative project off the ground? Where do we stand? What will happen in the future?

The final event is the perfect opportunity to look at the results, which form an important basis for a fair data economy and the deployment of the EU strategy for digitalization. The final event will demonstrate the milestones achieved by the entire OPEN DEI community and will initiate interesting discussions on the topic of digital transformation.

- Intensive panel discussion on challenges and opportunities in the four OPEN DEI domains:
  Manufacturing, agriculture, energy, and healthcare
- Inspiring keynotes on digital platforms, data spaces, and the Data Spaces Support Centre
- Knowledge corners on the results of large-scale pilots and digital maturity models
- In-depth presentations of the key enablers for supporting companies on digital transformation
  like data spaces building blocks and standardized architectures for interoperability

The outcomes of the project itself and the final event will be a last missing gift:
a strategic roadmap for digital transformation, data spaces and a recommendation how to move forward.

You don't want to miss this.
